

**Job:** AI / Data-Science Engineer

**Company:** Startup Golana Computing, Grenoble

**Start:** June – July 2025 • Full-time

**What you'll do**

- Build and refine ML models for anomaly detection on industrial sensor data.
- Design and integrate generative-AI / LLM components
- Deploy code from prototype to edge hardware and cloud dashboard.

**Must-have**

- Experience in data science / ML (Python, C).
- Startup mindset: autonomy, versatility, quick iteration.

**Nice-to-have**

- Hands-on experience with time-series data.
- Practical work with LLMs or other generative-AI frameworks.
- Background in industrial IoT / predictive maintenance

**Apply**

Send CV + short cover note to [cindy.lemastre@golana.fr](mailto:cindy.lemastre@golana.fr) with subject “AI Engineer – [Your Name]”.
